CC CDNAs (702946-49) coding for 4 novel human EPH-like receptor protein CC cDNAs (702946-49) coding for 4 novel human EPH-like receptor protein CC tyrosine kinases, HEK5, HEK7, HEK8 and HEK11 (R85089-92), respectively, CC were isolated from a human foetal brain cDNA library using a directed CC receptor PTKs and EPH-like receptor PTKs. BEK5, HEK7 and HEK8 show CC extensive homology to the catalytic domain of chicken EPH-like receptors Cek5, Cek7 and Cek8. HEK11 shows no homology to any known CC EPH-like receptor. The isolated cDNAs are used for prodn. of CC recombinant HEKs and chimeric receptors, in hybridisation assays, and to detect abnormalities in HEK receptor genes.

                                                                                                                                                                                                                                                        Claim 7; Fig 21; 194pp; English.

The present invention describes nucleic acid molecules for ror-1, ror-2, ehk-1 and ehk-2. Also described are the corresponding prot Ror-1; Ror-2; Ehk-1; and Ehk-2. The proteins are orphan receptor tyrosine kinases. The present sequence encodes rat Ehk-2. Sequence 3592 BP; 946 A; 916 C; 894 G; 834 T;

--- ~~~aeant invention describes nucleic acid
                                                                                                                                                                           The present invention describes nucleic acid molecules for ror-1 ror-2, ehk-1 and ehk-2. Also described are the corresponding pro Ror-1; Ror-2; Ehk-1; and Ehk-2. The proteins are orphan receptor tyrosine kinases. The present sequence encodes rat Ehk-1. Example 1; Page 47-49; 75pp; English.

A cDNA clone (T18893) codes for rat REK7 (R97853), an eph-related tyrosine kinase receptor, for which AL-1 (see also W97854) is a ligand. It was isolated using degenerate receptor tyrosine kinase receptor, for which AL-1 (see also W97854) is a commerce (T18894-96) to amplify cDNAs of an adult mouse hippocampal cDNA library. A PCR fragment was used as a probe to isolate the full-length REK7 CDNA from a rat hippocampal cDNA library. An CREK-1gG fusion was used to screen cultured cell lines for surface expression of REK7-binding activity. Primers based on isolated ligands were used to amplify human breast carcinoma BT20 cell cDNA, and an amplified fragment was used to screen a human foetal brain cDNA library, leading to the isolation of AL-1 cDNA (T18897). PS Claim 2; Fig 2; 72pp; English.

CC The present sequence encodes mouse Bsk, which is a receptor-like

CC Tyrosine kinase. The nucleic acid sequence encoding Bsk can be used in

CC tyrosine kinase. The nucleic acid sequence encoding Bsk can be used in

CC trom a manual afflicted with a disease, such as neurodegenerative

CC diseases or disorders and neoplasms. The nucleic acid sequence can also

CC be delivered into the limbic system of patients with limbic system

CC neurodegenerative disease, disorder or injury, to promote or enhance

CC limbic system neuron regeneration or growth. Such neurodegenerative

CC diseases include, Chromosomal abnormalities, degenerative growth and

CC injuries, neoplastic conditions, Natheimer's disease, epilepsy,

CC schizophrenia, or stroke and cerebral ischaemia.

CDNAS (T02946-49) coding for 4 novel human EPH-like receptor protein tyrosine kinases, HEK5, HEK7, HEK8 and HEK11 (R85089-92), respectively, were isolated from a human foetal brain cDNA library using a directed PCR approach with primers (see T02960-61) based on conserved regions of receptor PTKs and EPH-like receptor PTKs. HEK5, HEK7 and HEK8 show extensive homology to the catalytic domain of chicken EPH-like receptors. The isolated cDNAs are used for prodn. of recombinant HEKs and chimeric receptors, in hybridisation assays, and to detect abnormalities in HEK receptor genes.

CDNAs (T02946-49) coding for 4 novel

tyrosine kinases, HEK5, HEK7, HEK8 a

were isolated from a human foetal br
                                                                                                                                                                P-PSDB; R85092.

New nucleic acid encoding EPH-like receptor tyrosine kinase(s) and related vectors, host cells, proteins, antibodies etc., used diagnostically and therapeutically to modulate receptor activation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          T02949 standard; cDNA; 4529 BP.
T02949;
16-APR-1996 (first entry)
EPH-11ke receptor protein tyrosine kinase HEK11 cDNA.
EPH-11ke receptor protein tyrosine kinase; PTK; HEK11
human eph-11ke kinase; therapy; diagnosis; antibody;
Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         538
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                655
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    595
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            535

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PCR approach with primers (see T02960-61) based on conserved region receptor PTKs and EPH-like receptor PTKs. HEK5, HEK7 and HEK8 she extensive homology to the catalytic domain of chicken EPH-like receptors Cek5, Cek7 and Cek8. HEK11 shows no homology to any knot EPH-like receptor. The isolated cDNAs are used for prodn. Of recombinant HEKs and chimeric receptors, in hybridisation assays, to detect abnormalities in HEK receptor genes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Example 1; Page 115-116; 128pp; English.

CDNA cloning using adult mouse brains and Northern blotting identified 2 clones, MDK1 T1 (T32961) and MDK1 T2 (T32962), that coded for truncated versions (W03422 and W03423; respectively) of the novel mouse developmental kinase 1 (MDK1) (see also T32960), a new member of the eck/eph family of receptor tyrosine kinases.

MDK T1 and T2 each possess the entire ectodomain, the transmembrane domain and part of the juxtamembrane region of MDK1 (see also W03421), but lack the catalytic tyrosine kinase domain. They may have a modulatory function. The cDNA clones can be used to produce MDK1 T1 and T2, which are useful for screening potential agents for treatment of diseases characterised by abnormal signal transduction. CDNA cloning using adult mouse brains and MDK1 T2 (T32952), that identified 2 clones, MDK1 T1 (T32951) and MDK1 T2 (T32952), that coded for truncated versions (W03422 and W03423, respectively) of the novel mouse developmental kinase 1 (MDK1) (see also T32950), a new member of the eck/eph family of receptor tyrosine kinases.

MDK T1 and T2 each possess the entire ectodomain, the transmembrane domain and part of the juxtamembrane region of MDK1 (see also W03421), but lack the catalytic tyrosine kinase domain. They may have a modulatory function. The cDNA clones can be used to produce MDK1 T1 and T2, which are useful for screening potential agents for treatment of diseases characterised by abnormal signal transduction.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A cDNA clone (T32960) codes for mouse developmental kinase 1 (MDK1) (W03421), a new member of the eck/eph family of receptor tyrosine kinases (RTKS): To isolate the clone, CDNA from mouse embryos was subjected to PCR amplification with primers based on conserved motifs (see also W03426-27) of RTKs. An amplified fragment was used to screen an 11.5-day-old mouse embryo and an adult mouse brain CDNA library to obtain the MDK1 clone. 4 Sequence variants (see also W03422-25) of MDK1 were also identified. MDK1 nucleic acids can be used for the recombinant prodn. of MDK1, as probes to detect MDK1, and for the gene therapy of diseases involving abnormalities in signal transduction, such as neurodegenerative and neuroproliferative disorders and cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New mouse development kinase 1 gene - used for developing prods. diagnosis and treatment of abnormalities in signal transduction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       P-PSDB; W03421
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WO9621013-A1.

                                                                                                                                                                                                                                                                                                                                                   variant Cek7+ (Q90661) were isolated from a chick embryo library in lambda gtl1, and another variant, Cek7' (Q90662), from a chick embryonic brain cDNA library in lambda gtl1. The variants may originate via alternative spilcing of the same gene. Cek7 had the lowest level of expression of 7 novel Eph-related kinases examined and was barely detectable in adult tissues.

The variants may originate embryonic brain cDNA library in lambda gtll. The variants may originate of expression of 7 novel Eph-related kinases examined and was barely detectable in adult tissues.

Molecular cloning of HEK, the gene encoding a receptor
kinase expressed by human lymphoid tumor cell lines
Proc. Natl. Acad. Sci. U.S.A. 89 (5), 1611-1615 (1992)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          receptor protein-tyrosine kinase.
Homo sapiens lymphoid tumor cDNA to mRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               M83941.1 GI:183931
